

GIRAFFE

Giraffe is an all-condition long-range surveillance system designed to provide powerful Intelligence, Surveillance and Reconnaissance (ISR) capabilities under the toughest field conditions, such as extreme weather conditions. It is designed for both coastal and ship installations for naval and the coast guard vessels. It provides maritime environments with situational awareness that provides tactical understanding to enable real-time strategic decision-making under the toughest conditions.

Giraffe is mounted on a gyro stabilized pan-tilt unit equipped with a Day and long range thermal camera, which enables both day and night observation as well as target acquisition from remote locations using an intuitive, user-friendly Command and Control unit- AVIV C2I or any C2I/ C4I systems.

- Designed for rough weather and maritime environments - includes anti-fog vision capability.
- Optional Integrated tracking hardware and software for ship and mast installations
- Open interface offers integration with radar, C2I / C4I systems
