

GIRAFFE

Giraffe is a long-range surveillance system designed to provide powerful Intelligence, Surveillance and Reconnaissance capabilities (ISR) for commercial ports and merchant ships. The system provides civilian and government marine authorities with real-time situational awareness even under extreme weather conditions, such as severe fog.

Giraffe is mounted on a gyro stabilized pan-tilt unit equipped with a Day and long range thermal camera, which enables both day and night observation as well as target acquisition from remote locations using an intuitive, user-friendly Command and Control unit- AVIV C2I or C2I/ C4I systems.

- Designed for rough weather and maritime environments - includes anti-fog vision capability
- Optional Integrated tracking hardware and software for ship and mast installations
- Open interface offers integration with radar, C2I / C4I systems
